

# Awky Talky

## Final Project

What problem are you trying to solve or what are you trying to learn?

- What technologies will you be using. Why have you decided on those?

- Will you need to buy any supplies. If so, what, and how much will it cost?  
we will not need to buy any supplies

**Who** *wants to use this product?*

Anyone who has ever had a hard time networking or just talking to people. Its not for any specific person, it can be used by everyone who has ever had a hard time starting a conversation.

.....  
...

**What** *does the product do?*

We want to solve the problem of social awkwardness by creating a conversation aid app. It generates conversation starters based on categories. We will be using HTML JavaScript, JQuery and possibly CSS

**Why** *is your product better than what is currently available?*

The point is that there are no other apps like this available and ours is easy to access on a phone, and can quickly generate a conversation starter.

Also includes tips for interaction that helps with the delivery.

## Use Case

User will open the app, and tap on the buttons (which are categories) and have the choice of going on to a different question (once a question is generated), or returning to the previous page (home page)

## Categories

- Casual
  - Sports
  - Flirt
  - TV shows

- Food
- Stores/Shopping
- Games
- TBA
- Business
  - Interview question
  - Financial questions
  - International affairs
  - Back pocket questions (emergency questions)- aka emergency question
  - TBA

## Components

- Buttons(split button- will go to the next page)
- Questions
- Categories (the different topics we want to include in our app)
- Back button- this will allow the user to go back to the previous categories (if he/she messes up)
- Favorite/Like button- will allow users to see advice from different users based on how many likes each question received
- Save Favorite Questions- this will put questions the user likes in a separate list for the user to in the future

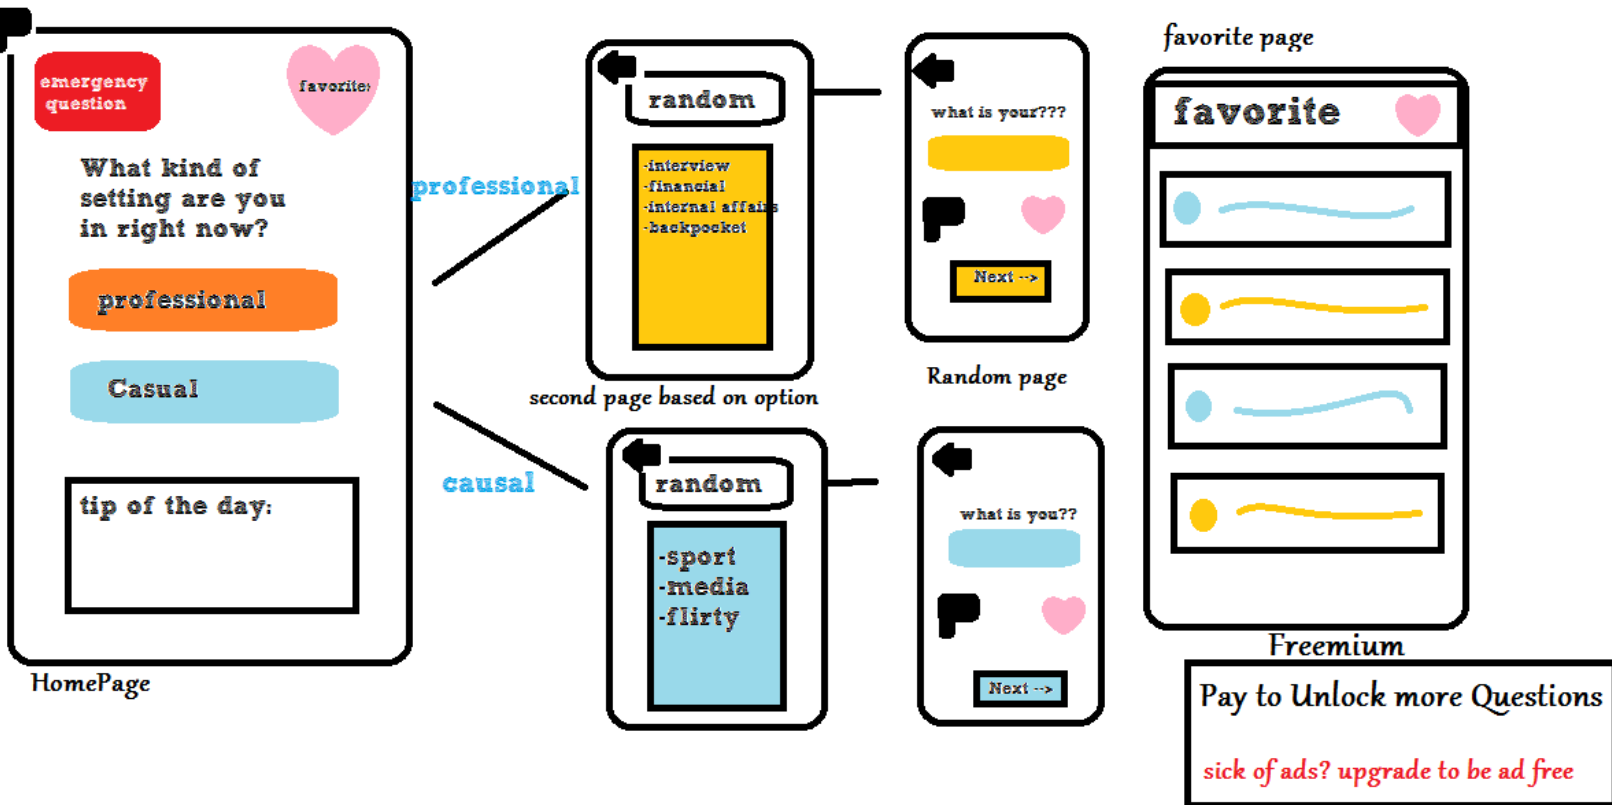

**Monetization:** we will give a free trial and hide some questions. To access more questions, one will have to pay.

- free users only get one category of questions
  - Ads- will pop up for every question
  - freemium ads will disappear

## Risk Assessment:

- It repeats the same question
  - use what we learned with the cards and ensure that these questions will not be repeated.

- Can't generate similar questions based on category
- Page loads very slowly - figure out what is causing it to load to slow however if isn't that serious then we will just ignore it
